

Complete, Flexible Control.

Risk Management

CQG's risk management tools are the most sophisticated and cost-effective in the industry.

State-of-the-art margining

Omnibus account management

Customer Account Service Tool (CAST)

Manage with Confidence

Flexible and cost-effective risk control.

State-of-the-Art Margining

We provide the tools that allow you to manage risk on both an order and account basis. More importantly, we provide superior tools for managing account balances in real time. CQG's risk engine is one of the most advanced in the industry. We maximize your protection by using exchange-published risk arrays in our calculations and by determining margin account requirements on the basis of overall portfolio risk (a SPAN[®]-like calculation*).

Flexible Group Accounts

CQG's risk management system allows you to create master accounts with highly flexible sub-accounts that share purchasing power, exposure, or both.

Robust Management of Omnibus Accounts

CQG makes it easy for you to efficiently and securely increase your business by offering non-disclosed account services (omnibus accounts) to non-clearing FCMs. CQG's real-time risk engine can be applied to omnibus accounts with the same speed and effectiveness as to individual accounts. All of the standard risk parameters can be used to manage your omnibus accounts. In addition, your omnibus account client can manage all sub-accounts using the same features of CQG's risk management system.

*SPAN[®] is a registered trademark of the CME Group.

Fast, real-time risk management.

Fast, Cost-Effective, and Real-Time

CQG's risk management system is designed for speed. It is hosted on CQG's servers and adds less than one millisecond to any trade while applying one of the most advanced risk engines. You receive all the cost-effective protection you want, and your traders receive all the speed they need. CQG's risk management system includes the Customer Account Service Tool (CAST), an easy-to-use, browser-based tool for brokers and support personnel to manage accounts and set risk parameters.

Exclusive Route-Based Risk Control

CQG is one of the first in the industry to provide comprehensive, route-based risk management. CQG's route-based solution allows you to establish order and position size control over exchange routes. With multiple routes per exchange, you can manage your exchange exposure. Using route-based risk management allows you to efficiently manage your exchange relationships on an exchange-by-exchange basis.

Risk Based on Working Orders

It is not enough to analyze risk based only upon open positions and the current state of the market. Working orders have the potential to increase risk and must be incorporated into your portfolio's risk analysis. CQG's risk management system makes sure you are never in a position where a customer's working orders have added, unwanted risk.

Award-Winning Customer Support

CQG provides extensive on-site training to implement CQG's risk management system and CAST. We also provide around-the-clock service to our FCMs. Our dedicated FCM Desk is staffed by our most senior support personnel who are experts in CAST as well as in trade routing. Our customer support team operates from ten locations across the globe and strives to exceed customer expectations twenty-four hours a day. CQG's customer support is backed by product development staff in four countries, product specialists, and data quality and operations teams.

CQG: Everything Your Traders Need

Quality, Innovation, and Superior Service

Consolidated Market Data

CQG delivers a high-speed consolidated market data feed covering multiple asset classes. Dedicated teams in five locations across the globe actively maintain real-time and historical data quality. We handle ever-increasing market data volumes, so you don't have to.

Decision-Making Tools

Powerful, flexible, and easy to use, CQG charts and studies combine with the best real-time and historical market data in the business to provide traders with critical insight into market activity.

Server-Side Tools

Spread orders, orders into aggregated markets, and smart iceberg orders are managed on CQG servers collocated with exchange-matching engines.

Electronic Trade Routing

Today's traders need reliable, high-speed access to electronic markets. The CQG Hosted Exchange Gateways provide our customers with low-latency connections to major cash and futures exchanges.

Risk Management

CQG's risk management module enables FCMs to perform pre-trade and post-trade risk evaluation using CQG's industry-leading proprietary margining system.

Enterprise Data Solutions

CQG software combines the world's most sophisticated analysis tools with our high-performance market data feed to enable your decision making and execution.
